ichi CSEO	Description No. 100 Section 10
C,	There is a ant on your balcony. It wants to leave the rail so sometimes it moves right and sometimes it moves left until it gets
۶ ک	exhausted. Given an integer array A of size N which consists of integer 1 and -1 only representing ant's moves.
EMPBIE	Where 1 means ant moved unit distance towards the right side and -1 means it moved unit distance towards the left . Your task is to find and return the integer value representing how many times the ant reaches back to original starting position.
('	is to find and return the integer value representing how many times the ant reaches back to original starting position. Note:
, A	Assume 1-based indexing
CSEO(S	Assume that the railing extends infinitely on the either sides
%	Input Format:
MPBTech.	input1 : An integer value N representing the number of moves made by the ant.
V,	input1 : An integer value N representing the number of moves made by the ant. input2 : An integer array A consisting of the ant's moves towards either side
	Cample input
